# What is DevOps?

*“It’s a movement of people who think its time for change in the IT industry – time to stop wasting money, time to start delivering great software and building systems that scale and last” – Patrick Debois*

j  
a  
t  
a  
B  
a  
t  
r  
a

"DevOps is  
development  
and operations  
collaboration"

"DevOps  
is using  
automation"

"DevOps  
is small  
deployments"

"DevOps is  
treating your  
infrastructure  
as code"

"DevOps  
is feature  
switches"

"Kanban  
for Ops?"

# Continuous Integration

# DevOps culture

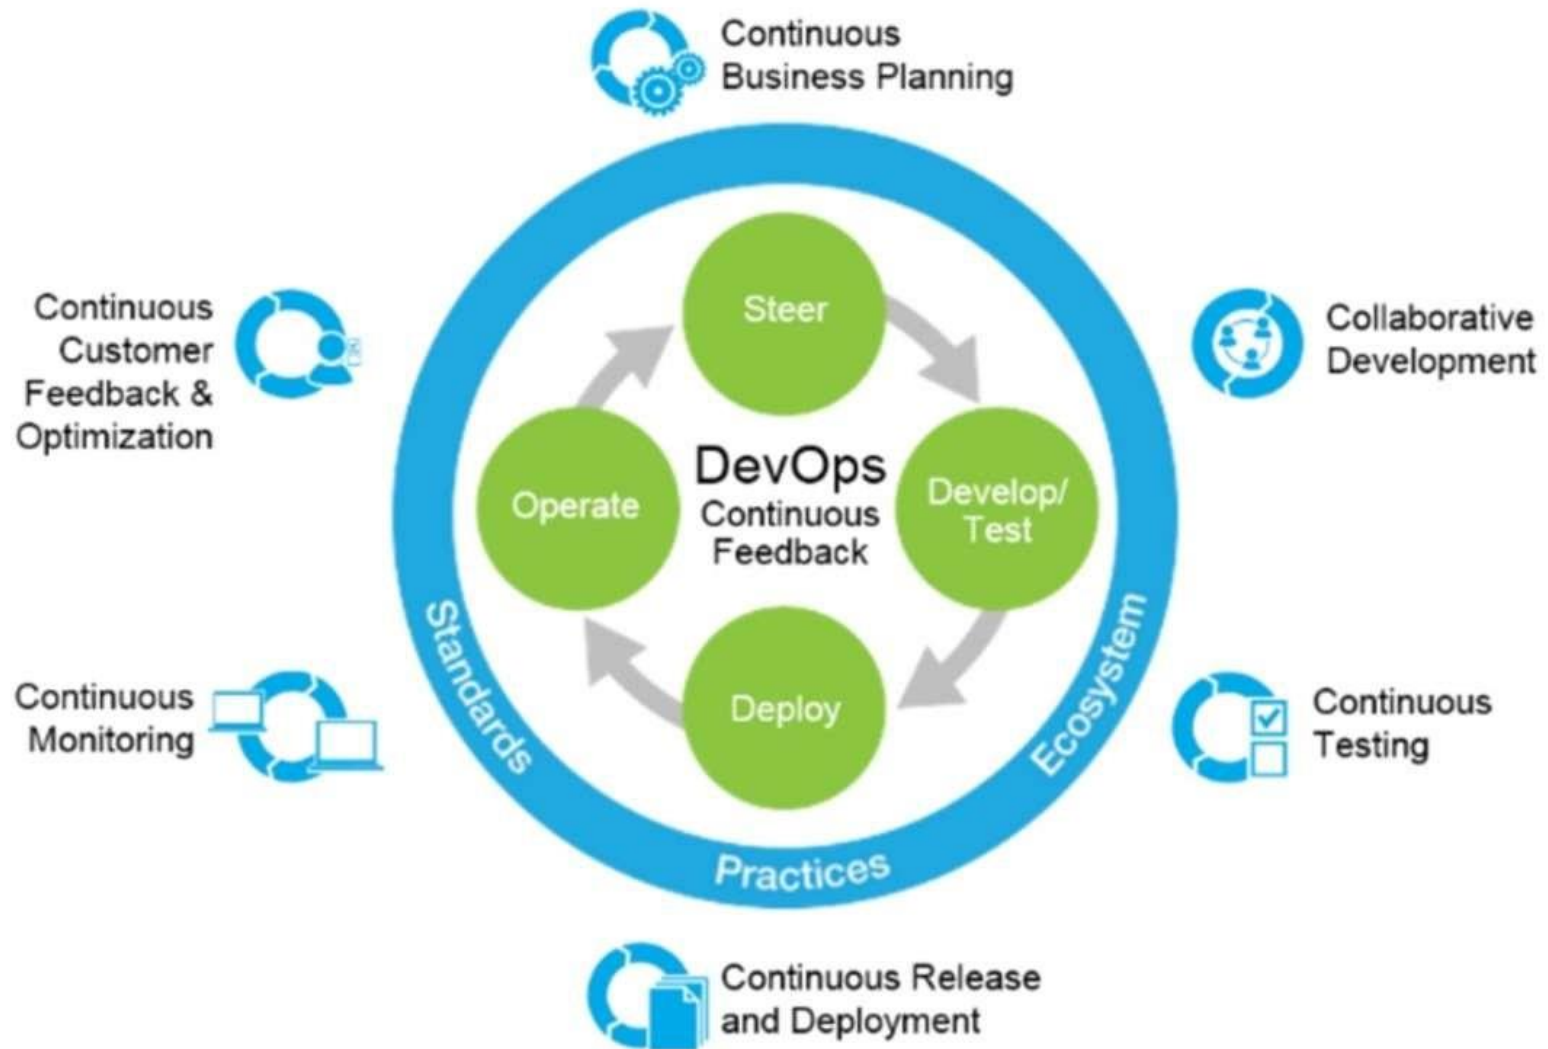

**DEVOPS**

# DevOps

# Goals

# Add Ops into Dev

- Enhance Service Design with Operational Knowledge
  - Reliability
  - Performance
  - Security
  - Test Them
- Build Feedback Loops from Production
  - Monitoring and KPI Dashboards
  - Postmortems
- Foster Culture of Responsibility
  - Whether your code passes test, gets deployed and stays up for users is your responsibility
- Make Development Better with Ops
  - Productionlike environments
  - Power tooling

# Accelerate Flow to Production

- Reduce batch size
- Automated environments means identical dev/test/prod
- Create safety through automation
  - Continuous Integration/Testing
  - Automated Regression Testing
  - Continuous Delivery
  - Continuous Deployment
  - Feature Flags (A/B Testing)
  - Security Testing

# Add Dev into Ops

- Don't do tasks for people
  - Build tools so they can do their own work
- Monitoring/logging/metrics feeds back into dev (and the business)
- Blameless incident postmortems
- Developers Do production support/empower ops acceptance
